

# Cleaning & Maintenance Instructions

## Plastic & Recycled Plastic Products

### *For Routine Maintenance & Cleaning*

For general cleaning of plastic products, use soap and water or a household cleaner such as 409, Windex, etc.

### *For Most Stains:*

Most stains can be easily removed from plastic products with soap and water or a household cleaner such as 409, Windex, or Grease Lightning (sold at Wal-Mart). A high-speed pressure washer may be used for best results.

### *For Persistent Stains:*

For more persistent stains, try an industrial-strength cleaner with a pressure washer or a 10% solution of bleach or vinegar (do a test on a small inconspicuous area first to ensure color-fastness). *Pool furniture* with NO exposed metal parts may also be soaked in pool water and wiped clean.
